Wasp-Separ Fuel Polisher

This is the second unit I have had from separ, the first is still going well after many years. I find the build quality is much better than other similar units on the market; I carried out extensive research on this. I find the unit reliable and is easy to operate and use. I asked for a specific type of trolley with three wheels that allows it to climb stairs, they were able to fulfil my request and deliver the unit quickly.

The unit polishing a fuel tank at ground level.

Polishing rig in action on the roof of a building in London

This site required me to manoeuvre the unit from ground level via a lift, then across a roof, over gravel and then up and over some gantries. The tank being polished is a standby generator day tank of 800ltrs, the fuel was visually dirty and laboratory results showed dirt/debris floating within the fuel. On completion of two hours running the polishing rig the fuel tested clean and dry. I was able to clean the fuel without taking the generator off line.

I would recommend this unit as being the best on the market, the build quality and the quality of the components used is second to none. The company are a pleasure to know and work with.

I have also had experience with fixed units, again the build quality and components used is the best on the market.

Yours Sincerely,

Keith Manning
